

The raw Sheet

When the patient opens the Heath Records, he has the empty sheet with the different categories recognizable by the color code. He can fill all the different parts. If he had already the ASCII version, he is able to upload it and the fields are automatically filled.

My Health Record

My Health assistant, to let people who love me looking after me.

Health Record

Principle :

The main idea of this submission is to have a simple page where all the most important informations appear in one glance to be quickly understood by the doctors and medical staff. The different topics are clearly separated and identifiable with colors and icons. The users always know in which part and topic they are.

Healht Record has to be simply, human and easy.

There are 4 different topics: General Informations, Reactions, History, Annex. Each topic is indicated with a specific color code to be quickly recognizable.

All the informations are available in a glance (one sheet to avoid from clicking or scrolling through pages). In these topics, the different categories are represented with a simple pictogram.

The number of details per category can be fixed, because all don't have the same importance :

Informations : always

Guardian : always

Provider : always

Allergies : last 10 years or 3 max

Immunizations : last 10 years or 3 max

Medication : last 6 months or 4 max

Procedures : last 10 years or 3 max

Problem List : always

Family History : mother + father
(+additionnal grandparents if usefull)

Plan of care : next 6 months or 3 max

Encounters : next 6 months or 3 max

Lab Results : available with click

Of course it is possible to add or modify the number of details per category according to the patient's pathology and needs.

By clicking on the cross on the top right, the user/doctor can access to all the historic of each category, also he is able to edit and add new elements. (Some of the categories or elements should be locked with a special pin number, only modifiable by a medical person, for important/usefull health elements).

This is also possible to superimpose a specific reaction or a really important information (schema beside)

At the top of the main sheet (next to the User informations), an area shows quickly the current medicine, remembers the next appointments. There are also written last height, weight and blood presure.

In this area this is also possible to click on the life history which shows all patient height, weight and blood presure evolution. In it, the patient is more free to write non-listed informations, or show on a body's pictogram the different problems he had/has.

- General
- Reactions
- Historic
- Annex

1 Detail

Encounters

Encounter:

ED Visit for Ankle Sprain

Provider:

Dr. Henry Seven

Location:

Community Hospital

Date:

March 28, 2005

Encounter:

Gall Bladder Surgery

Provider:

Dr. Bala Venktaraman

Location:

Life History

Lab Results

For the lab results part, all the detailed informations are present because it's needed for the medical staff. But to make it more legible, if the user clicks the link «View Diagram / Compare», he has access to all the historic and he can compare the different results through a diagram. The last results appears in red, the one before in black, then in grey, middle blue, light blue, yellow ...

The user (or medical staff) also has the possibility to add new results as gynecological, scanner, radiography, ultrasound, sampling ...

- new result
- last result
- penultimate
- pre-penultimate
- pre-pre
- pre-pre-pre
- ...

View Diagram / Compare

By clicking on the cross, the pictogram or «View Diagram / Compare», an accordion (similar to JQuery effects) opens up. The area has a different background color than the others to be quickly recognizable. In this area, this is possible to edit, add a new result, also to see the pre-view results and to compare them quickly through a diagram with color code.
